

Food Chains in Philippine Habitats

LEARNING COMPETENCIES

The learners can:

- Construct simple food chains in Philippine habitats to show how organisms depend on one another for food.

DEFINITION

What is a food chain?

A food chain shows how food and energy move from one living thing to another.

Arrows show WHO EATS WHO →

Grass

Grasshopper

Frog

Snake

Producers make their own food.

Most producers are plants. They use sunlight to make their own food.

EXAMPLES

- Grass
- Trees
- Algae
- Other green plants

Consumers get food by eating others.

Animals are consumers. They come in different levels depending on what they eat.

Primary Consumer

Eats plants

Grasshopper

Secondary Consumer

Eats primary consumers

Frog

Other Consumers

Eats other consumers

Snake

EXAMPLE • GRASSLAND

A simple food chain

Grass → Grasshopper → Frog → Snake

● **Grass**

Producer

● **Grasshopper**

Primary Consumer

● **Frog**

Consumer

● **Snake**

Consumer

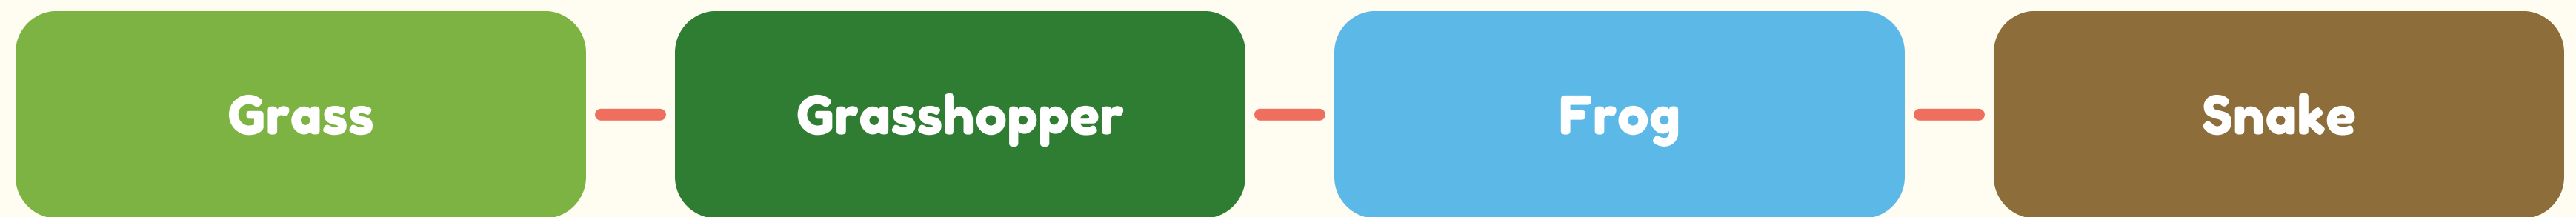

Garden

The caterpillar eats the plant, and the bird eats the caterpillar. A simple garden food chain!

Grassland

Grass feeds the grasshopper. The frog eats the grasshopper. The snake eats the frog!

Pond

Algae feed the small fish. The larger fish eats the small fish. Splash!

WHY IT MATTERS

Everyone depends on someone!

Food chains show that animals and plants depend on each other for survival.

What if... there is less grass?

Less grass → Grasshoppers have less food →
Frogs also have less food.

ACTIVITY 1 • BUILD THE FOOD CHAIN #1

Which comes first? Which comes last?

Arrange these organisms in the correct order.

Snake

Grass

Frog

Grasshopper

1

2

3

4

Hint: Remember who eats who!

ACTIVITY 1 • BUILD THE FOOD CHAIN #2

Which comes first? Which comes last?

Arrange these organisms in the correct order.

Bird

Plant

Caterpillar

1

2

3

Hint: Start with the one that makes its own food.

ACTIVITY 1 • BUILD THE FOOD CHAIN #3

Which comes first? Which comes last?

Arrange these organisms in the correct order.

Large Fish

Algae

Small Fish

1

2

3

Hint: Producers come first in the chain.

ACTIVITY 2

Producer or Consumer?

Identify each organism. Producers make their own food. Consumers eat others.

PRODUCER

CONSUMER

Grass

PRODUCER

Frog

CONSUMER

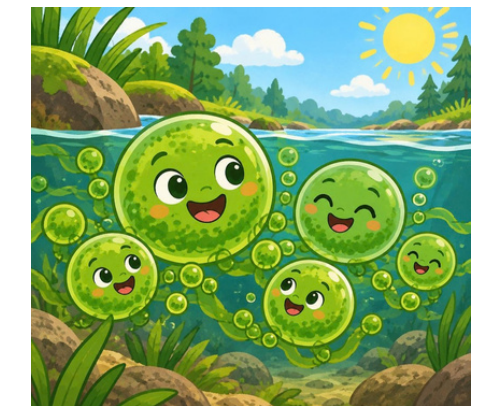

Mango Tree

PRODUCER

Grasshopper

CONSUMER

Algae

PRODUCER

Check what you know

1 What does a food chain show?

- A. The body parts of animals
- B. Feeding relationships among organisms
- C. The stages of an animal's life
- D. The different habitats of plants

2 Which organism is a producer?

- A. Frog
- B. Snake
- C. Grass
- D. Grasshopper

Check what you know

3 Which organism is a consumer?

- A.** Grass
- B.** Tree
- C.** Algae
- D.** Frog

4 Which is the correct food chain?

- A.** Frog → Grasshopper → Grass → Snake
- B.** Grass → Grasshopper → Frog → Snake
- C.** Snake → Frog → Grasshopper → Grass
- D.** Grasshopper → Frog → Grass → Snake

5 Why do organisms depend on one another in a food chain?

- A.** They are connected through feeding relationships.
- B.** They all eat plants.
- C.** They all live in the same place.
- D.** They do not need food.

Thank you!
