

Life Cycles of Plants & Animals

LEARNING COMPETENCIES

The learners can:

- Compare the life cycles of plants and animals using flowcharts or diagrams.

LET'S EXPLORE

Have you ever watched something grow?

🌱 Have you planted a seed and watched it grow into a plant?

🐣 Have you seen a baby animal grow up into an adult?

Every living thing goes through different stages as it grows!

DEFINITION

What is a Life Cycle?

A life cycle is the series of stages a living thing goes through as it grows, develops, and reproduces. Different plants and animals have different life cycles — but every cycle repeats again and again.

Six Stages of a Plant's Life

Seed

1

Germination

2

Seedling

3

Mature Plant

4

Flower & Fruit

5

New Seeds

6

1 Seed

The life cycle begins with a seed. Inside every seed is the tiny beginning of a new plant, waiting for water, warmth, and light to wake it up.

💡 Look closely — this is where the magic starts!

2 Germination

When conditions are just right, the seed begins to sprout. A tiny root grows down into the soil while a small shoot pushes up toward the sunlight.

💡 Look closely — this is where the magic starts!

3 Seedling

The young plant is called a seedling. It grows its first true leaves and begins to make its own food using sunlight.

💡 Look closely — this is where the magic starts!

4 Mature Plant

The plant grows bigger and stronger. When it is fully grown, it becomes a mature plant that can produce flowers.

💡 Look closely — this is where the magic starts!

5 Flower and Fruit

The mature plant grows flowers. Flowers develop into fruits, and inside each fruit are new seeds — ready to begin the cycle again!

💡 Look closely — this is where the magic starts!

PUTTING IT ALL TOGETHER

The Plant Life Cycle

A cycle never ends — new seeds start the journey all over again!

Animals grow, too — in their own way!

Just like plants, animals grow through different stages. But the stages look very different depending on the species — a chicken grows one way, and a butterfly grows a completely different way!

FROM EGG TO ADULT HEN

Chicken Life Cycle

1

Egg

2

Chick

3

Young Chicken

4

Adult Chicken

COMPLETE METAMORPHOSIS

Butterfly Life Cycle

1

Egg

2

Larva (Caterpillar)

3

Pupa (Chrysalis)

4

Adult Butterfly

SIDE BY SIDE

Plants vs. Animals

Stage	 Plant	 Animal
Beginning	Seed	Egg
Young	Seedling	Baby / Larva
Grown Up	Mature Plant	Adult Animal
Reproduces by	Flowers & Fruits	Eggs or Live Young

THREE CYCLES AT A GLANCE

Life Cycle Flowcharts

 Plant

 Chicken

 Butterfly

ACTIVITY 1

Arrange the Life Cycle!

The stages below are mixed up. Can you put them in the correct order?

 **PLANT**

Mature Plant

Seed

Flower & Fruit

Seedling

 **BUTTERFLY**

Pupa

Adult

Egg

Caterpillar

 **CHICKEN**

Adult

Egg

Young Chicken

Chick

ACTIVITY 2

Whose Life Cycle Is It?

Look at each stage below. Does it belong to a Plant 🌱, a Chicken 🐣, or a Butterfly 🦋?

Seed

Chick

Pupa

Caterpillar

Mature Plant

Egg (Chicken)

Check What You've Learned

1. A life cycle is best described as...

A. A one-time event B. A series of stages a living thing goes through C. Only what plants do D. A type of flower

2. Which stage begins a plant's life cycle?

A. Flower B. Fruit C. Seed D. Mature plant

Check What You've Learned

3. Which is the correct order for a butterfly?

- A. Egg → Pupa → Larva → Adult
- B. Egg → Larva → Pupa → Adult
- C. Larva → Egg → Pupa → Adult
- D. Adult → Egg → Pupa → Larva

4. A chicken hatches from a(n)...

- A. Seed
- B. Pupa
- C. Egg
- D. Flower

Check What You've Learned

5. Both plants and animals...

- A. Have seeds
- B. Grow, develop, and reproduce
- C. Have wings
- D. Live only in soil

THANK
YOU!
